

SUBJECT Curriculum Map

Year 7

Rationale and Links to The National Curriculum

Computing skills are a vital component to any student's future success when they leave Carnforth High School. Through engaging content and a supportive environment, pupils will develop the skills and understanding that allow them to safely and confidently use technology in the real world; building their digital literacy, helping them become good "digital citizens" and preparing them for further study or job opportunities in the technology sector and beyond.

At the heart of Computing is Computer Science, where students learn the key ideas behind information and computation, how digital systems function, and how to apply this knowledge through programming. With this foundation, they're able to confidently use information technology to design programs, build systems, and create all kinds of digital content.

The design of the Key Stage 3 Computing curriculum revolves around ensuring pupils are equipped with the relevant skills that will enable them to successfully study either GCSE Computer Science or Creative iMedia as an option for Key Stage 4. It takes inspiration from a wide range of sources within the education sector, building on the experience of a number of professional bodies, such as the NCCE, PGOnline, CSUK and more, while focussing on providing content that is relatable to our pupils.

The content in Year 7 allows pupils to take their first steps in meeting the skills and processes outlined in the Computing National Curriculum. Unit 1 revolves around understanding a range of ways to use technology safely, Unit 2 looks at understanding the hardware and software components that make up computer systems, Unit 3 and 4 give the opportunity to design, use and evaluate computational abstractions and introduces pupils to their first programming language (Scratch), Unit 5 and 6 allow pupils to undertake creative projects that involve selecting, using, and combining multiple applications, collecting and analysing data, create, re-use, revise and re-purpose digital artefacts.

	Half Term 1 – Digital Literacy (6 Lessons)	Half Term 2 – Computer Systems (7 Lessons)	Half Term 3 & Half Term 4 – Scratch Programming (11 Lessons)	Half Term 5 – Spreadsheets (6 Lessons)	Half Term 6 – Graphics Editing (6 Lessons)
Key Topics	<ul style="list-style-type: none">Logging in to and using school systemsPupils know the use of social mediaProtecting personal data	<ul style="list-style-type: none">What is a computer?What is computer hardware and what are the main parts in a computer?Using different input & output devices	<ul style="list-style-type: none">Planning, including the use of algorithmsUsing block coding to create a programmeSequencing instructionsCreating and using variablesUtilising user inputUsing selection in a programme to make decisions	<ul style="list-style-type: none">How to add, edit and delete data in a spreadsheetEffective formatting of a spreadsheetUsing mathematical operators to make calculations	<ul style="list-style-type: none">Understand bitmap and vector imagesSourcing assets and copyright lawUnderstand the properties of digital images and how they affect quality

	<ul style="list-style-type: none"> Using Word and PowerPoint to present information Using Outlook to manage emails Using OneNote to share resources Effective web searching 	<ul style="list-style-type: none"> Function of the CPU What is Computer software and its different purposes? Operating systems and their main functions 	<ul style="list-style-type: none"> Using Boolean operators in programming code Testing a programme to make sure it meets the purpose 	<ul style="list-style-type: none"> Using formulae to carry out calculations automatically Using functions, such as SUM, AVERAGE, MAX, MIN, COUNT, IF, and VLOOKUP Presenting data in graphs 	<ul style="list-style-type: none"> Combine images and text in an impactful way Use selection tools effectively Be able to remove parts of an image Use layers appropriately Understand the use of different adjustment tools
Substantive Knowledge (The knowledge the students will develop)	<ul style="list-style-type: none"> School systems: Pupils know login procedures, digital etiquette, and responsible use of school platforms. Social media: Know how social media platforms work, including risks, benefits, and digital footprints. Data protection: Pupils know what personal data is, why it needs to be protected, and how to stay safe online. Productivity tools: Knowing the features and purposes of: <ul style="list-style-type: none"> a) Microsoft Word for document creation b) PowerPoint for presentation design c) Outlook for sending, receiving, and organising emails 	<ul style="list-style-type: none"> Definition of a computer: Pupils know what a computer is and its basic purpose. Computer hardware: Identifying the physical components of a computer system, such as the CPU, RAM, storage, and peripheral devices. Input & output devices: Recognising and describing various input (e.g., keyboard, mouse, scanner) and output devices (e.g., monitor, printer, speakers). Function of the CPU: Pupils know the role of the Central Processing Unit as the brain of the computer, processing 	<ul style="list-style-type: none"> Algorithms: Pupils know what an algorithm is and how it can be used to plan a sequence of steps to solve a problem. Block-based coding: Knowing how Scratch uses visual blocks to represent code and build programs. Sequencing: Pupils know that the order of instructions affects the outcome of a program. Variables: Knowing what variables are and how they store data within a program. User input: Pupils know how a program can take input from a user to affect its behaviour. Selection (if/else): Pupils know how a program can make decisions using conditional statements. Boolean logic: Recognising and applying Boolean operators (e.g., and, or, not) within conditions. Testing and debugging: Knowing the importance of testing a program to check if it works correctly and how to find and fix errors. 	<ul style="list-style-type: none"> Basic spreadsheet operations: Pupils know how to add, edit, and delete data in spreadsheet cells. Formatting techniques: Knowing how to format cells effectively (e.g., fonts, colours, borders, number formats) to improve readability and presentation. Mathematical operators: Recognising and using basic operators like +, -, ×, ÷ within formulas. Formulas and calculations: Pupils know how to create and use formulas for automatic calculations. Common functions: Knowing the purpose and use of built-in 	<ul style="list-style-type: none"> Bitmap vs Vector images: Pupils know the differences between these image types (e.g., scalability, file size, resolution). Digital image properties: Knowing how resolution, dimensions, and file formats affect image quality and performance. Sourcing digital assets legally: Pupils know copyright laws, licensing (e.g., Creative Commons), and ethical use of images. Image composition: Knowing how to combine text and images effectively to create visually appealing and purposeful designs. Adjustment tools: Pupils know tools

	<p>d) OneNote for digital note-taking and collaboration</p> <ul style="list-style-type: none"> • Web searching: Pupils know how search engines work and how to search effectively using keywords and operators. 	<p>instructions and managing tasks.</p> <ul style="list-style-type: none"> • Computer software: Knowing what software is, including the distinction between application software and system software. • Operating systems: Pupils know what an operating system does, including managing hardware, running applications, and providing a user interface. 		<p>spreadsheet functions, such as:</p> <p>a) SUM, AVERAGE, MAX, MIN, COUNT: for basic data analysis</p> <p>b) IF: for conditional logic</p> <ul style="list-style-type: none"> • Data visualisation: Pupils know how to present data effectively using different types of graphs (e.g., bar charts, line graphs, pie charts). 	<p>like brightness, contrast, hue/saturation, and filters and how they impact the appearance of an image.</p> <ul style="list-style-type: none"> • Layers: Pupils know the function and benefits of using layers in image editing software.
<p>Disciplinary Knowledge (The skills and approaches that students will develop)</p>	<ul style="list-style-type: none"> • Log in and navigate school systems confidently and responsibly. • Use email tools effectively to manage communication (e.g., folders, CC/BCC, replying appropriately). • Create and format documents and presentations to share information clearly and professionally. • Share and collaborate on resources using platforms like OneNote. • Practice safe and ethical behaviour online, including 	<ul style="list-style-type: none"> • Classify and differentiate between hardware and software components. • Describe and explain how individual components contribute to the overall function of a computer system. • Analyse the purpose and suitability of different input and output devices for various tasks or user needs. • Interpret and articulate the role of the CPU and how it processes data and instructions. • Compare types of software and 	<ul style="list-style-type: none"> • Plan programs effectively by designing flowcharts or writing algorithms before coding. • Build functional Scratch programs using block code to meet a specific goal or solve a problem. • Sequence commands accurately to ensure correct program flow. • Create and manipulate variables to store and change data during program execution. • Design programs that interact with the user through input features (e.g., keyboard or mouse input). • Use selection and logic to control decision-making within the program. • Apply Boolean operators to refine conditions and control flow. • Test and debug code independently to ensure functionality and correct any issues. 	<ul style="list-style-type: none"> • Manipulate and manage data confidently within a spreadsheet environment. • Apply formatting thoughtfully to make data clearer and more meaningful for the audience. • Construct and apply formulas to solve problems and automate calculations. • Use functions effectively to simplify tasks, analyse data, and derive insights. • Choose and create appropriate graphs to communicate data findings clearly. 	<ul style="list-style-type: none"> • Use selection tools accurately to isolate parts of an image (e.g., marquee, lasso, magic wand). • Edit and manipulate images by removing unwanted elements cleanly and precisely. • Apply layers effectively to build complex compositions in an organised and editable way. • Combine text and images to convey a clear message or aesthetic, considering layout and design principles. • Apply adjustments and filters to enhance or stylise

	<p>protecting passwords and personal information.</p> <ul style="list-style-type: none"> • Evaluate online information for reliability and relevance using search strategies. • Reflect critically on how social media impacts communication, privacy, and well-being. 	<p>evaluate their uses in real-world contexts.</p> <ul style="list-style-type: none"> • Explore and reflect on how operating systems support the running of a computer and manage its resources. 		<ul style="list-style-type: none"> • Evaluate spreadsheet designs for efficiency, readability, and effectiveness in presenting data. 	<p>images for different purposes.</p> <ul style="list-style-type: none"> • Critically evaluate design choices based on image quality, clarity, copyright, and visual impact.
Assessment (The methods that teachers will use to assess the progress of all students)	<ul style="list-style-type: none"> • Summative end of unit assessment task (L6) – Completed online, provides pupils with instant feedback on performance 	<ul style="list-style-type: none"> • Summative end of unit assessment task (L7) – Completed online, provides pupils with instant feedback on performance 	<ul style="list-style-type: none"> • Summative assessment task (L5) – Completed online, provides pupils with instant feedback on performance • End of unit review of programming project – graded against specific criteria (L11) 	<ul style="list-style-type: none"> • Summative assessment task (L6) – Completed online, provides pupils with instant feedback on performance 	<ul style="list-style-type: none"> • Summative assessment task (L6) – Completed online, provides pupils with instant feedback on performance
Reading, Writing and Vocabulary	<p>Key Vocab Digital Literacy, E-Safety, Social Media, Username, Password, Search Engine, Email, Outlook, OneNote</p> <p>Disciplinary Reading - Read an article on data privacy and summarise the key risks using digital literacy vocabulary.</p> <p>Disciplinary Writing - Create a how-to guide for younger students explaining how to use</p>	<p>Key Vocab Hardware, Software, Input, Output, Random Access Memory, Read Only Memory, Processor Central Processing Unit, Operating System, Application, Binary</p> <p>Disciplinary Reading - Read an article explaining how the CPU, RAM, and storage devices interact. Highlight and define all technical terms (CPU, RAM, input/output, etc.).</p>	<p>Key Vocab Instruction, Sequence, Selection, Iteration, Algorithm, Variable, Input, Programming, Testing</p> <p>Disciplinary Writing - Write a reflection explaining how you debugged an error in your Scratch code.</p>	<p>Key Vocab Spreadsheet, Data, Information, Formula, Function, Graph, Cell, Formatting, Calculation, Operator</p> <p>Disciplinary Reading - Read a guide on how spreadsheets are used in business. Identify key vocabulary (e.g., cell, formula, function, operator).</p>	<p>Key Vocab Graphics, Editing, Bitmap, Vector, Selection, Properties, Pixel, Pixelated, Resolution, Sourcing, Copyright</p> <p>Disciplinary Reading - Read an article comparing bitmap and vector graphics. Create a glossary of terms.</p> <p>Disciplinary Writing - Write an evaluation of the graphics editing task</p>

	email and cloud tools safely.			Disciplinary Writing - Write a set of instructions for a classmate explaining how to use a function like VLOOKUP or SUM.	you completed, using terms like "layers," "selection tool," "adjustments," etc.
Numeracy	<ul style="list-style-type: none"> • Time management – managing schedules in Outlook or OneNote; interpreting time and dates. • Interpreting search results – evaluating numerical data such as search rankings, number of hits, or file sizes. 	<ul style="list-style-type: none"> • Logical reasoning and pattern recognition – understanding how the CPU processes instructions and how systems follow sequences. • Basic understanding of data representation (optional enrichment) – e.g., binary or memory/storage sizes (bits, bytes). 	<ul style="list-style-type: none"> • Sequencing and order – understanding the impact of instruction order on program logic. • Use of coordinates – moving sprites in a 2D plane using x and y values. • Variables and data handling – storing and manipulating numerical values. • Boolean logic – using comparison operators (=, >, <) and logical connectives (and, or, not). • Debugging with precision – identifying and correcting numerical errors in logic or timing. 	<ul style="list-style-type: none"> • Arithmetic operations – using addition, subtraction, multiplication, and division in formulas. • Understanding of functions – applying SUM, AVERAGE, MAX, MIN, COUNT, IF, and VLOOKUP with numerical data. • Data analysis – interpreting numerical patterns, comparing values, and evaluating outputs. • Graphical representation of data – choosing and interpreting bar charts, line graphs, and pie charts. 	<ul style="list-style-type: none"> • Measurement and proportion – understanding image resolution (e.g., pixels per inch), resizing images while maintaining aspect ratio. • Scale and dimension – adjusting image size while keeping quality consistent.
Personal Development	<ul style="list-style-type: none"> • Online safety assembly – Being a good digital citizen. 	<ul style="list-style-type: none"> • N/A 	<ul style="list-style-type: none"> • Coding Club – Available for pupils to embed and enhance their programming skills at lunch time. 	<ul style="list-style-type: none"> • N/A 	<ul style="list-style-type: none"> • Poster Competition – Provides the opportunity for pupils to try out their graphics editing skills to create a poster for a specific theme

Year 8

Rationale and Links to The National Curriculum

Computing skills are a vital component to any student's future success when they leave Carnforth High School. Through engaging content and a supportive environment, pupils will develop the skills and understanding that allow them to safely and confidently use technology in the real world; building their digital literacy, helping them become good "digital citizens" and preparing them for further study or job opportunities in the technology sector and beyond.

At the heart of Computing is Computer Science, where students learn the key ideas behind information and computation, how digital systems function, and how to apply this knowledge through programming. With this foundation, they're able to confidently use information technology to design programs, build systems, and create all kinds of digital content.

The design of the Key Stage 3 Computing curriculum revolves around ensuring pupils are equipped with the relevant skills that will enable them to successfully study either GCSE Computer Science or Creative iMedia as an option for Key Stage 4. It takes inspiration from a wide range of sources within the education sector, building on the experience of a number of professional bodies, such as the NCCE, PGOnline, CSUK and more, while focussing on providing content that is relatable to our pupils.

The content in Year 8 allows pupils to build on their experience in Year 7 in meeting the skills and processes outlined in the Computing National Curriculum. Unit 1 revolves around understanding a range of ways to use technology safely, respectfully, responsibly and securely, Unit 2 looks at understanding algorithms and computational thinking, Unit 3 and 4 give the opportunity to design, use and evaluate computational abstractions and introduces pupils to their second programming language (Python), Unit 5 and 6 allow pupils to undertake creative projects that involve selecting, using, and combining multiple applications, collecting and analysing data, create, re-use, revise and re-purpose digital artefacts.

	Half Term 1 – Cyber Security and Digital Wellbeing (6 Lessons)	Half Term 2 – Computational Thinking (7 Lessons)	Half Term 3 & Half Term 4 – Python Programming (11 Lessons)	Half Term 5 – Databases (6 Lessons)	Half Term 6 – Audio Editing (6 Lessons)
Key Topics	<ul style="list-style-type: none">• Health & safety issues when using technology• Impact of online abuse and false information	<ul style="list-style-type: none">• Using algorithms to help solve problems• Understand how to utilise abstraction• Understand how to utilise decomposition	<ul style="list-style-type: none">• Use a text-based programming language to create programs• Effective planning, including the use of flowchart and pseudocode algorithms• Using different data types• Create and assign variables	<ul style="list-style-type: none">• Understand the difference between flat file and relational databases• Create tables in a database	<ul style="list-style-type: none">• Understand the advantages of different audio file formats (MP3 and WAV)• Creating a script for audio projects

	<ul style="list-style-type: none"> Understand different types of online scams Understand different types of computer misuse Methods used to stop network threats Careers in cyber security 	<ul style="list-style-type: none"> Understand how to utilise pattern recognition Demonstrating problem solving skills Converting binary, denary and hexadecimal values 	<ul style="list-style-type: none"> Identify and fix syntax and logic errors Use sequence, selection and iteration to create working programmes Utilise comments to document code in a programme Create a programme to meet the needs of a given problem 	<ul style="list-style-type: none"> Assign appropriate properties to tables and Be able to add, edit and delete data in a database table Be able to query data in tables Utilise basic SQL commands to retrieve data from a database 	<ul style="list-style-type: none"> Sourcing assets appropriately Using basic editing tools, such as; importing, selecting, cutting, zooming, timeshift Using advanced editing tools, such as; fading-in/out, changing pitch and tempo, envelope, amplification Collecting audio using a microphone
Substantive Knowledge (The knowledge the students will develop)	<ul style="list-style-type: none"> Health & safety when using technology: Pupils know risks like eye strain, posture issues, and repetitive strain injury, and how to prevent them. Online abuse and misinformation: Knowing the forms of online abuse (e.g., cyberbullying, trolling), and how false information spreads online (e.g., fake news, deepfakes). Online scams: Recognising different scams such as phishing, identity theft, and fake websites. Computer misuse: Pupils know what constitutes illegal or 	<ul style="list-style-type: none"> Algorithms: Pupils know what an algorithm is and how it provides a step-by-step method for solving problems. Abstraction: Pupils know how to filter out unnecessary information to focus on what's important. Decomposition: Knowing how to break down complex problems into smaller, manageable parts. Pattern recognition: Pupils know how to identify trends, similarities, or repeated elements in problems or data. Number systems: Pupils know binary, denary (decimal), and hexadecimal systems, and how to 	<ul style="list-style-type: none"> Text-based programming: Pupils know how Python differs from block-based languages, focusing on syntax, indentation, and structure. Algorithms: Pupils know how to plan with flowcharts and pseudocode before coding. Data types: Knowing and using different data types (e.g., string, integer, float, boolean). Variables: Pupils know how to declare and assign variables to store data. Control structures: Knowing how to use: <ul style="list-style-type: none"> a) Sequence – step-by-step instructions b) Selection – decisions using if/else c) Iteration – loops using for and while Error types: Pupils know the difference between syntax errors (e.g., typos) and logic errors (e.g., wrong output). Code documentation: Pupils know the purpose and use of comments (#) to explain or annotate code. Problem-solving approach: Pupils know how to create programs that meet a brief or specification. 	<ul style="list-style-type: none"> Flat file vs relational databases: Pupils know the structural differences, benefits, and drawbacks of each model. Tables and fields: Knowing how databases are organised into tables with fields (columns) and records (rows). Data types and properties: Pupils know how to assign appropriate field types (e.g., text, number, date/time) and properties (e.g., primary key, validation rules). SQL basics: Pupils know how SQL (Structured Query Language) is used to retrieve, filter, and organise data. 	<ul style="list-style-type: none"> Audio file formats: Pupils know the differences between formats like MP3 and WAV, including compression, quality, and file size. Scripting for audio: Knowing the importance of planning dialogue, narration, or structure before recording. Sourcing assets: Pupils know how to find and use sound files legally and ethically, including copyright considerations. Basic audio editing tools: <ul style="list-style-type: none"> a) Importing b) Selecting c) Cutting d) Zooming e) timeshift (moving clips) Advanced audio editing tools:

	<p>unethical computer use, including hacking, malware distribution, and unauthorised access.</p> <ul style="list-style-type: none"> • Cybersecurity methods: Knowing common ways to prevent network threats, such as firewalls, antivirus software, strong passwords, and multi-factor authentication. • Cyber Careers: Pupils know the range of careers available in cyber and the requirements needed to pursue these careers 	<p>convert between them.</p>		<ul style="list-style-type: none"> • Queries: Knowing how to extract specific information from one or more tables using filters and conditions. 	<ul style="list-style-type: none"> a) Fading in/out b) pitch shifting c) tempo adjustments d) envelope control e) amplification • Microphone use: Knowing how to record clean audio, including mic technique and environment awareness.
<p>Disciplinary Knowledge (The skills and approaches that students will develop)</p>	<ul style="list-style-type: none"> • Identify and evaluate risks associated with technology use on physical, emotional, and societal levels. • Critically assess online content for credibility, reliability, and bias. • Recognise and respond to scams and security threats in realistic digital scenarios. • Analyse legal and ethical issues surrounding misuse of technology. 	<ul style="list-style-type: none"> • Design and write algorithms to solve specific tasks or challenges. • Apply abstraction to simplify real-world problems by ignoring irrelevant details. • Decompose problems logically to make them easier to solve. • Use pattern recognition to speed up problem-solving or spot reusable solutions. • Demonstrate logical problem-solving in various contexts (not 	<ul style="list-style-type: none"> • Write and test Python code using correct syntax and structure. • Plan programs effectively using pseudocode and flowcharts. • Use and manipulate variables with appropriate data types. • Apply control structures (sequence, selection, iteration) to build functional programs. • Debug code by identifying and fixing syntax or logic errors. • Document code clearly using comments for readability and maintenance. • Solve real problems by writing programs that meet specific user needs or briefs. 	<ul style="list-style-type: none"> • Design and create tables with appropriate field names, data types, and primary keys. • Input and maintain data by adding, editing, and deleting records in tables. • Assign field properties correctly to improve data integrity and prevent errors. • Construct queries to search for and filter data using multiple criteria. 	<ul style="list-style-type: none"> • Compare and evaluate file formats based on project needs (e.g., quality vs file size). • Write effective scripts for podcasts, voiceovers, or audio stories. • Source and organise audio assets legally, with attention to quality and compatibility. • Use editing software (e.g., Audacity) to: <ul style="list-style-type: none"> a) Import and arrange clips b) Cut and refine recordings

	<ul style="list-style-type: none"> • Evaluate security measures for effectiveness in protecting personal and network data. • Be able to search and navigate job listings to find suitable job roles of interest 	<p>limited to programming).</p> <ul style="list-style-type: none"> • Convert between number systems fluently and understand their relevance in computing (e.g., colour codes, IP addresses, memory sizes). 		<ul style="list-style-type: none"> • Write and execute basic SQL commands, such as: <ol style="list-style-type: none"> a) SELECT to retrieve fields b) WHERE to filter records c) ORDER BY to sort results 	<ol style="list-style-type: none"> c) Shift clips to align with a timeline • Apply advanced editing techniques to enhance audio quality and creativity. • Record audio using a microphone effectively, ensuring clarity and minimal background noise.
Assessment (The methods that teachers will use to assess the progress of all students)	<ul style="list-style-type: none"> • Summative end of unit assessment task (L6) – Completed online, provides pupils with instant feedback on performance 	<ul style="list-style-type: none"> • Summative end of unit assessment task (L7) – Completed online, provides pupils with instant feedback on performance 	<ul style="list-style-type: none"> • Summative assessment task (L5) – Completed online, provides pupils with instant feedback on performance • End of unit review of programming project – graded against specific criteria (L11) 	<ul style="list-style-type: none"> • Summative assessment task (L6) – Completed online, provides pupils with instant feedback on performance 	<ul style="list-style-type: none"> • Summative assessment task (L6) – Completed online, provides pupils with instant feedback on performance
Reading, Writing and Vocabulary	<p>Key Vocab Repetitive Strain injury, Cyber Bullying, Misinformation, Fake News, Data Protection, Password, Copyright, Environment, Cyber, Security, Phishing, Ransomware, Malware, Virus, Hacking, Social Engineering, Authentication, Anti-Virus, Firewall, Biometrics, Computer Misuse Act</p> <p>Disciplinary Reading - Read an article on the impact of cybercrime.</p>	<p>Key Vocab Algorithm, Flowchart, Pseudocode, Abstraction, Decomposition, Pattern Recognition, Binary, Denary, Hexadecimal</p> <p>Disciplinary Reading - Read a section from a textbook on abstraction, decomposition, and pattern recognition.</p> <p>Disciplinary Writing - Write a summary comparing how abstraction and decomposition were used to solve a class problem.</p>	<p>Key Vocab Algorithm, Flowchart, Pseudocode, Python, Integrated Development Environment (IDE), Programming, Variable, Selection, Iteration, Decision, Sequencing, Syntax, Logic Error, Debug, Comments</p> <p>Disciplinary Reading - Read a code walkthrough and highlight all keywords (e.g., variable, string, loop, function).</p> <p>Disciplinary Writing - Write a code explanation paragraph, clearly describing how your program works and why you chose certain structures.</p>	<p>Key Vocab Flat-file, Relational, Database, Table, Field, Record, Entity, Query, Structured Query Language (SQL), Boolean, Primary Key , Foreign Key</p> <p>Disciplinary Reading - Read a database case study and extract terminology such as "table," "field," "primary key," and "query".</p> <p>Disciplinary Writing - Write a user guide explaining how to perform a basic query in SQL.</p>	<p>Key Vocab Audio, Audacity, Import, Record, Select, Zoom, Cut, Fade, Amplify, Timeline, Pitch, Tempo, Copyright, MP3, WAV</p> <p>Disciplinary Reading - Read a beginner's guide to audio editing tools and highlight vocabulary like "amplify," "fade," "clip," "pitch," and "tempo."</p> <p>Disciplinary Writing - Write a blog post describing the process you followed to edit an audio file.</p>

	Disciplinary Writing - Write a guide to staying safe when using computers.				
Numeracy	<ul style="list-style-type: none"> • Data interpretation – e.g., reading statistics about cyberbullying incidents, scam reports, or environmental impact (e.g., % of e-waste recycled). • Evaluating energy usage – interpreting numerical data on electricity consumption or carbon emissions linked to device use. 	<ul style="list-style-type: none"> • Working with number systems – binary (base 2), decimal (base 10), hexadecimal (base 16). • Conversions and calculations – converting between binary, decimal, and hex using division, multiplication, and place value understanding. • Logic and reasoning – using structured, sequential thinking to follow or create algorithms. 	<ul style="list-style-type: none"> • Working with numeric data types – integers and floats for arithmetic and logic-based tasks. • Arithmetic and expressions – using operators (+, -, *, /, %) within programs. • Logical reasoning – applying Boolean logic (and, or, not) and relational operators (<, >, ==). • Using iteration effectively – understanding loops as controlled repetition, often tied to numeric counters or conditions. 	<ul style="list-style-type: none"> • Logical operators – using =, >, <, >=, AND, OR in queries and SQL commands. • Sorting and filtering data – interpreting structured data sets and applying logical rules to extract relevant information. • Understanding data types – choosing between text, number, date, etc., and recognising how they behave in operations. 	<ul style="list-style-type: none"> • Timing and duration management – accurately trimming clips and syncing them to a time-based structure (e.g., seconds, minutes). • Volume and amplification levels – adjusting decibel levels logically to balance tracks. • Tempo and pitch changes – understanding numerical values (e.g., bpm, semitone shifts) when modifying audio.
Personal Development	<ul style="list-style-type: none"> • Online safety assembly – Being a good digital citizen. 	<ul style="list-style-type: none"> • N/A 	<ul style="list-style-type: none"> • Coding Club – Available for pupils to embed and enhance their programming skills at lunch time. 	<ul style="list-style-type: none"> • N/A 	<ul style="list-style-type: none"> • N/A

SUBJECT Curriculum Map

Year 9

Rationale and Links to The National Curriculum

Computing skills are a vital component to any student's future success when they leave Carnforth High School. Through engaging content and a supportive environment, pupils will develop the skills and understanding that allow them to safely and confidently use technology in the real world; building their digital literacy, helping them become good "digital citizens" and preparing them for further study or job opportunities in the technology sector and beyond.

At the heart of Computing is Computer Science, where students learn the key ideas behind information and computation, how digital systems function, and how to apply this knowledge through programming. With this foundation, they're able to confidently use information technology to design programs, build systems, and create all kinds of digital content.

The design of the Key Stage 3 Computing curriculum revolves around ensuring pupils are equipped with the relevant skills that will enable them to successfully study either GCSE Computer Science or Creative iMedia as an option for Key Stage 4. It takes inspiration from a wide range of sources within the education sector, building on the experience of a number of professional bodies, such as the NCCE, PGOnline, CSUK and more, while focussing on providing content that is relatable to our pupils.

The content in Year 9 allows pupils to build on their experience from Year 7 and Year 8 in meeting the skills and processes outlined in the Computing National Curriculum. Unit 1 looks at how technology is used to solve real-world problems, Unit 2 looks at how data of various types can be represented and manipulated digitally, Unit 3 and 4 give the opportunity to design, use and evaluate computational abstractions and introduces pupils to alternative programming languages (HTML, CSS and JavaScript), Unit 5 looks at how computers communicate with one another and with other systems, and Unit 6 allows pupils to undertake creative projects that involve selecting, using, and combining multiple applications, collecting and analysing data, create, re-use, revise and re-purpose digital artefacts.

	Half Term 1 – Impact of Digital Technology (6 Lessons)	Half Term 2 – Data Representation (7 Lessons)	Half Term 3 & Half Term 4 – Web Design (11 Lessons)	Half Term 5 – Computer Networks (6 Lessons)	Half Term 6 – Mobile App Development (6 Lessons)
Key Topics	<ul style="list-style-type: none">• Uses of artificial intelligence• Technology utilised for self-driving cars• Development of robotics	<ul style="list-style-type: none">• Recap converting binary, denary and hexadecimal values• Adding 2 binary values and the issue of overflow• Using Boolean logic	<ul style="list-style-type: none">• Understand what makes a good website• Create a web page• Using HTML coding to add basic content to webpages• Create working hyperlinks• Utilise suitable navigation for a website• Use CSS coding to consistently format style options	<ul style="list-style-type: none">• What is a network?• Advantages and disadvantages of using computer networks• How data is sent along a network	<ul style="list-style-type: none">• Design a health tracker mobile app• Understand mobile phone hardware• Online safety in app development• Develop a mobile app

	<ul style="list-style-type: none"> • Application of technology in medicine • VR vs AR • Environmental impact of tech 	<ul style="list-style-type: none"> • Converting binary to text using character sets • Converting binary to images • Converting binary to sound • Use of lossy and lossless compression 	<ul style="list-style-type: none"> • Use JavaScript to add interactive elements to a webpage 	<ul style="list-style-type: none"> • Using LANs • Using WANs • Identify different network topologies • Network hardware 	<ul style="list-style-type: none"> • Evaluate a mobile app
Substantive Knowledge (The knowledge the students will develop)	<ul style="list-style-type: none"> • Artificial Intelligence (AI): Pupils know what AI is, its current capabilities, and common uses (e.g., chatbots, image recognition, predictive text). • Self-driving car technology: Knowing the components involved (sensors, AI, machine learning, GPS, LiDAR) and how they work together. • Robotics development: Pupils know how robots are built, programmed, and used in sectors like manufacturing, delivery, and exploration. • Medical technology: Exploring how digital tools (e.g., diagnostic AI, robotic surgery, wearable tech) improve patient care and healthcare systems. 	<ul style="list-style-type: none"> • Number systems recap: Pupils know and converting between binary, denary (decimal), and hexadecimal. • Binary addition: Performing binary addition and Pupils know the concept of overflow when a result exceeds the available bit limit. • Boolean logic: Pupils know how AND, OR and NOT gates are used in circuits. • Character sets: Pupils know how binary represents text using character encoding systems like ASCII and Unicode. • Binary representation of images: Knowing 	<ul style="list-style-type: none"> • Effective web design principles: Pupils know what makes a website user-friendly, accessible, visually appealing, and functional (e.g., layout, colour schemes, typography, responsiveness). • HTML (HyperText Markup Language): Learning how HTML structures content using elements like <code><head></code>, <code><body></code>, <code><h1></code>, <code><p></code>, <code></code>, and <code><a></code>. • Hyperlinks and navigation: Pupils know how to link pages using anchor tags (<code></code>) and how navigation impacts user experience. • CSS (Cascading Style Sheets): Knowing how CSS styles content, including rules for colour, fonts, layout, and consistency across pages. • JavaScript basics: Pupils know how JavaScript can make websites dynamic and interactive (e.g., buttons, image sliders, popups). 	<ul style="list-style-type: none"> • What a network is: Pupils know that a computer network is two or more devices connected to share data, resources, and communication. • Advantages & disadvantages: <ol style="list-style-type: none"> a) Benefits: file sharing, communication, resource sharing (e.g. printers), central backups. b) Risks: security issues, technical faults, network congestion. • Data transmission: Know how data is broken into packets, sent over cables/wirelessly, and reassembled at its destination using protocols. • LAN (Local Area Network): Pupils know networks 	<ul style="list-style-type: none"> • Pupils know how to design a mobile app, including planning features for a health tracker. • Pupils know the main components of mobile phone hardware (e.g., sensors, touchscreen, memory, processors) and how they relate to app functionality. • Pupils know the importance of online safety in app development, including data protection and secure handling of personal information. • Pupils know the process of developing a mobile app using design and coding tools. • Pupils know how to evaluate an app

	<ul style="list-style-type: none"> • Environmental impact: Pupils know how digital tech contributes to environmental issues (e-waste, energy use) and its potential to help (e.g., smart grids, climate modelling). • Careers in tech: Awareness of job roles in the digital sector (e.g., software engineer, data analyst, cybersecurity specialist, AI researcher). 	<p>how images are stored using binary (e.g., bitmaps, pixels, colour depth).</p> <ul style="list-style-type: none"> • Binary representation of sound: Pupils know how sound is digitised using sampling rate, bit depth, and binary encoding. • Compression techniques: Pupils know the difference between lossy (e.g., MP3, JPEG) and lossless (e.g., PNG, FLAC) compression, including advantages and drawbacks. 		<p>within a limited area (e.g. schools, offices).</p> <ul style="list-style-type: none"> • WAN (Wide Area Network): Pupils know larger-scale networks like the internet that span multiple locations. • Network topologies: Star, Bus, Ring, Mesh – advantages, disadvantages, and how data flows through each. • Network hardware: Pupils know the roles of devices such as: Routers, switches, hubs, modems, network interface cards (NICs), access points. 	<p>against criteria such as usability, accessibility, performance, and safety.</p>
Disciplinary Knowledge (The skills and approaches that students will develop)	<ul style="list-style-type: none"> • Evaluate the benefits and risks of emerging technologies in everyday life. • Research and interpret information about how different technologies are used in specific industries. • Reflect critically on the ethical, social, and environmental implications of 	<ul style="list-style-type: none"> • Convert between number systems with confidence (binary ↔ denary ↔ hex). • Perform binary addition and identify overflow errors in calculations. • Use Boolean logic, identifying AND, OR and NOT gates and use these in a circuit diagram. 	<ul style="list-style-type: none"> • Design web pages using effective layout and navigation structures. • Write and edit HTML code to add text, images, headings, and links to a webpage. • Create working hyperlinks that connect pages or link to external sites. • Build a navigation menu that is clear, consistent, and easy to use. • Apply CSS styling to customise fonts, colours, spacing, and layout across multiple pages. • Incorporate JavaScript to add interactivity (e.g., form validation, button actions, hover effects). • Test and debug their website to ensure it functions as intended and displays correctly across pages. 	<ul style="list-style-type: none"> • Compare different network types and explain suitable use cases (e.g. LAN vs WAN). • Analyse advantages and disadvantages of network setups and topologies. • Identify appropriate network hardware based on the needs of a scenario. • Draw and interpret network diagrams, 	<ul style="list-style-type: none"> • Plan and design a mobile app using flowcharts, storyboards, or mock-ups. • Link app features to the hardware capabilities of mobile devices (e.g., accelerometer for step counting). • Apply principles of online safety and responsible design to protect users' data. • Build and test a working mobile app,

	<p>technological advancement.</p> <ul style="list-style-type: none"> • Explore career paths and develop awareness of required skills and qualifications in the tech sector. • Analyse case studies to understand real-world applications of AI, robotics, and medical technology. 	<ul style="list-style-type: none"> • Interpret character codes to convert binary values into readable text. • Explain how images and sound are digitally represented and stored using binary. • Compare compression methods and justify when to use lossy vs lossless formats. • Apply logical reasoning to understand how digital information is manipulated at a low level. 		<p>showing how devices are connected.</p> <ul style="list-style-type: none"> • Describe the flow of data through a network using correct terminology (e.g., packets, protocol, IP address). • Evaluate network performance factors such as bandwidth, topology, and hardware. 	<p>iterating and refining design.</p> <ul style="list-style-type: none"> • Evaluate digital products, providing constructive, evidence-based feedback using subject-specific vocabulary.
Assessment (The methods that teachers will use to assess the progress of all students)	<ul style="list-style-type: none"> • Summative end of unit assessment task (L6) – Completed online, provides pupils with instant feedback on performance 	<ul style="list-style-type: none"> • Summative end of unit assessment task (L7) – Completed online, provides pupils with instant feedback on performance 	<ul style="list-style-type: none"> • Summative assessment task (L5) – Completed online, provides pupils with instant feedback on performance • End of unit review of programming project – graded against specific criteria (L11) 	<ul style="list-style-type: none"> • Summative assessment task (L6) – Completed online, provides pupils with instant feedback on performance 	<ul style="list-style-type: none"> • Summative assessment task (L6) – Completed online, provides pupils with instant feedback on performance
Reading, Writing and Vocabulary	<p>Key Vocab</p> <p>Artificial Intelligence, Autonomous, Sensors, LiDAR, Turing-Test, Robotics, Medicine, Virtual Reality, Augmented Reality, Environmental, Application</p>	<p>Key Vocab</p> <p>Binary, Denary, Boolean, Overflow, Storage, Character Set, ASCII, Unicode, Bitmap, Pixel, Pixelation, Analogue, Sample, Amplitude, Frequency, Compression, Lossy, Lossless</p>	<p>Key Vocab</p> <p>Website, Webpage, Structure, Static, Hyperlink, Navigation, HTML, CSS, Style, Formatting, Tags, JavaScript</p> <p>Disciplinary Reading - Read a tutorial on HTML/CSS/JavaScript and identify new terms (e.g., tag, hyperlink, class, style).</p>	<p>Key Vocab</p> <p>Network, Data, Packet, Local Area Network, Wide Area Network, Topology, Star, Bus, Ring, Router, Ethernet, Wi-Fi, Hub, Switch</p> <p>Disciplinary Reading - Read a description of</p>	<p>Key Vocab</p> <p>Mobile application, User interface, User experience, Prototype, Wireframe, Storyboard, Sensor, Touchscreen, Hardware, Online safety, Data protection, Evaluation, Accessibility, Feature set, Deployment</p>

	<p>Disciplinary Reading - Read an article about AI or robotics in society and list pros and cons using subject-specific vocabulary.</p> <p>Disciplinary Writing - Write a summary on whether technology is having a positive or negative impact on the world.</p>	<p>Disciplinary Reading - Read a chapter or guide on binary and hexadecimal. Create a vocabulary map linking terms like "overflow," "character set," "lossless," etc.</p> <p>Disciplinary Writing - Write a paragraph explaining how an image is represented in binary.</p>	<p>Disciplinary Writing - Write a developer log entry describing the structure and features of your website project.</p>	<p>LAN, WAN, and topologies. Create a vocabulary list with definitions.</p> <p>Disciplinary Writing - Write an explanation of how data travels across a network using correct terminology.</p>	<p>Disciplinary Reading - Read a case study about health or fitness apps. Extract vocabulary such as "interface," "hardware," "evaluation," and "safety."</p> <p>Disciplinary Writing - Write an evaluation report of your health tracker app, using disciplinary vocabulary to explain design choices and user safety features.</p>
Numeracy	<ul style="list-style-type: none"> • Analysing environmental data – interpreting graphs or numerical information about e-waste, energy consumption, or CO₂ emissions. • Technology performance metrics – comparing specifications or success rates (e.g., accuracy of AI, error rates in autonomous driving). 	<ul style="list-style-type: none"> • Place value systems – applying positional notation in binary, denary, and hexadecimal. • Binary addition – performing calculations and understanding carry-over logic. • Understanding bit depth and resolution – calculating file sizes for images or sound based on bits per pixel/sample. 	<ul style="list-style-type: none"> • Using coordinates and units – applying percentages, pixels, em, and rem for layout and spacing in CSS. • Understanding RGB and HEX colour codes – interpreting and manipulating numeric colour representations. 	<ul style="list-style-type: none"> • Calculating data transfer speed and bandwidth – comparing network speeds (e.g. Mbps, Gbps). • Working with topologies – logical thinking about how connections scale (e.g. mesh topology connections: $n(n-1)/2$). • Binary in addressing – understanding basics of IP addressing and subnetting (introductory level). 	<ul style="list-style-type: none"> • Using numerical data within a health tracker app (e.g., counting steps, measuring distance, tracking calories). • Applying formulas for calculations within the app • Logical reasoning in app design, including conditional logic (if/then decisions).
Personal Development	<ul style="list-style-type: none"> • Online safety assembly – Being a good digital citizen. 	<ul style="list-style-type: none"> • N/A 	<ul style="list-style-type: none"> • Coding Club – Available for pupils to embed and enhance their programming skills at lunch time. 	<ul style="list-style-type: none"> • N/A 	<ul style="list-style-type: none"> • N/A

SUBJECT Curriculum Map

Year 10 – GCSE Computer Science

Rationale and Links to The National Curriculum

Studying GCSE Computer Science provides students with the knowledge and skills needed to understand and shape the digital world around them. Technology is at the core of modern life, from smartphones and apps to healthcare systems, transportation, and entertainment. By learning how computers work and how software is created, students gain insight into the foundations of innovation and problem-solving in the 21st century.

The course develops both practical and analytical skills. Programming encourages logical thinking, creativity, and resilience, as students design, test, and improve solutions to real problems. Understanding computer systems, data, and networks also helps students become informed users and creators of technology, not just passive consumers. These skills are highly transferable, supporting success in mathematics, science, and many other disciplines.

GCSE Computer Science is also an excellent preparation for future opportunities. With the growing demand for computing expertise in almost every industry, the subject opens pathways to further study and a wide range of careers, from software development and cybersecurity to engineering and data science. Most importantly, it empowers students to engage confidently with the digital world and to contribute positively to the technological future.

Pupils are given the opportunity to study GCSE Computer Science in Year 10 and Year 11, which helps them to develop their capability, creativity and knowledge in computer science, develop and apply their analytic, problem-solving, design, and computational thinking skills, understand how changes in technology affect safety, including new ways to protect their online privacy and identity, and how to identify and report a range of concerns.

	Half Term 1 - Computer Systems (15 Lessons)	Half Term 2 – Programming Fundamentals (17 Lessons)	Half Term 3 – Computational Thinking (Algorithms) (14 Lessons)	Half Term 4 – Programming Next Steps (12 Lessons)	Half Term 5 – Computational Thinking (Data Representation) (14 Lessons)	Half Term 6 – Computer Networks & Cyber Security (14 Lessons)
Key Topics	<ul style="list-style-type: none">What is a computer, including embedded systemsUnderstanding the CPU roleWhat affects the performance of the CPU	<ul style="list-style-type: none">Using data typesAssigning variablesAssigning constantsWriting programs using selectionCreating input and output	<ul style="list-style-type: none">Understand the term algorithmUnderstand the use of decomposition & abstractionRepresenting algorithms using pseudocode and flowcharts	<ul style="list-style-type: none">Creating programs using iteration (While and For loops)Using trace tables to follow a loopNested selection and iterationMethods of data validation	<ul style="list-style-type: none">Use the different number bases; decimal, binary and hexUnderstand how binary and hex are usedConvert values between the	<ul style="list-style-type: none">Advantages & disadvantages of networksPAN, LAN and WANWired vs wirelessTopologies – star vs busProtocols

Substantive Knowledge (The knowledge the students will develop)	<ul style="list-style-type: none"> What a computer is, including the distinction between general-purpose and embedded systems (e.g., washing machines, satnavs). The role of the CPU: Pupils know that the CPU processes instructions using the fetch-decode-execute cycle. Factors affecting CPU performance: Pupils know how clock speed, number of cores, and cache size impact processing power. Primary memory: Pupils know the purpose and differences between 	<ul style="list-style-type: none"> Data types: Pupils know the common types used in programs, such as integer, float, string, Boolean, and character. Variables: Pupils know how to declare and assign variables to store values during program execution. Constants: Pupils know how to assign constant values that do not change during program execution. Selection: Pupils know how to write programs that use if, elif, and else statements to make decisions. 	<ul style="list-style-type: none"> Algorithms: Pupils know that an algorithm is a step-by-step procedure for solving a problem or performing a task. Decomposition: Pupils know how to break complex problems into smaller, more manageable parts. Abstraction: Pupils know how to filter out unnecessary details to focus on what's important in solving a problem. Pseudocode and flowcharts: Pupils know how algorithms can be represented visually or in structured text 	<ul style="list-style-type: none"> Iteration: Pupils know how to use WHILE and FOR loops to repeat sections of code based on conditions or ranges. Trace tables and loops: Pupils know how to use trace tables to track values through iterative loops and check for correct output. Nested control structures: Pupils know how to use selection and iteration inside each other, such as IF statements inside loops or loops within loops. 	<ul style="list-style-type: none"> Number bases: Pupils know the purpose of decimal (denary), binary, and hexadecimal in computing contexts. Binary and hexadecimal usage: Pupils know how binary is used in data storage and processing, and how hexadecimal is used for memory addresses and compact representation. Conversions: Pupils know how to convert values between binary, hex, and decimal. Units of data: Pupils know the relationship between 	<ul style="list-style-type: none"> Network types: Pupils know the differences between PAN (Personal Area Network), LAN (Local Area Network), and WAN (Wide Area Network). Benefits and drawbacks: Pupils know the advantages and disadvantages of using computer networks. Wired vs wireless: Pupils know the characteristics, benefits, and limitations of wired and wireless network connections. Network topologies: Pupils know how star

	<p>RAM, ROM, Cache, and Registers in the memory hierarchy.</p> <ul style="list-style-type: none"> • Secondary storage: Pupils know the characteristics, advantages and disadvantages of optical, magnetic, solid-state, and cloud storage solutions. • Application vs system software: Pupils know the difference between user-facing programs (e.g., Word, browsers) and software that supports hardware operation (e.g., device drivers, file management). • The role of the operating system: Pupils know how the OS manages memory, multitasking, input/output devices, and user interfaces. • Logic gates: Pupils know the symbols and functions of AND, OR, and NOT gates, and how to draw simple logic diagrams using them. 	<ul style="list-style-type: none"> • Input and output: Pupils know how to use programming syntax to receive input from a user and display output to the screen. • Random number generation: Pupils know how to use built-in functions to generate random numbers, typically for games or simulations. • Arithmetic operators: Pupils know how to use +, -, *, /, % (modulus), and ** (exponentiation) within programs. • Logical expressions: Pupils know how to use Boolean logic (e.g., and, or, not) to form expressions that control program flow. • Trace tables: Pupils know how to use trace tables to track variable changes and predict output of a program step-by-step. 	<p>to aid understanding and planning.</p> <ul style="list-style-type: none"> • Input–Process–Output: Pupils know how to identify and interpret the flow of data through an algorithm. • Types of algorithms: Pupils know the purpose and application of algorithms for searching and sorting data. • Search algorithms: Pupils know how linear search checks items one by one, and how binary search efficiently splits a sorted list in half. • Sort algorithms: Pupils know how bubble sort repeatedly compares and swaps adjacent values, while merge sort splits and recombines data more efficiently. 	<ul style="list-style-type: none"> • Data validation: Pupils know methods such as length checks, range checks, type checks, and presence checks to ensure correct input. • Pseudocode planning: Pupils know how to use pseudocode to design the logic of a program before coding. • Subroutines: Pupils know how to structure programs using subroutines to organise code and avoid repetition. • Functions: Pupils know how to create and use functions that return values, including how to pass parameters. • Arrays: Pupils know how to use arrays to store and access multiple values using indexed positions. • Records: Pupils know that records store related data items of different types under one structure (like database entries or object-like storage). 	<p>bit, byte, kilobyte (KB), megabyte (MB), gigabyte (GB), and terabyte (TB).</p> <ul style="list-style-type: none"> • Binary arithmetic: Pupils know how to add binary numbers and recognise the issue of overflow. • Binary shifts: Pupils know how to perform left and right shifts and understand their effects (e.g., multiplying or dividing by 2). • Character sets: Pupils know how characters are represented using standards like ASCII and Unicode. • Image representation: Pupils know how images are stored using pixels, resolution, colour depth, and file size. • Sound representation: Pupils know how sound is represented through sampling rate, bit depth, and sample resolution. • Data compression: Pupils know the purpose of compression and the 	<p>and bus topologies are structured and the advantages/disadvantages of each.</p> <ul style="list-style-type: none"> • Protocols: Pupils know what network protocols are and the purposes of common examples such as HTTP, HTTPS, FTP, TCP/IP, SMTP, IMAP. • TCP/IP model: Pupils know the structure and function of the 4-layer TCP/IP model (Application, Transport, Internet, Link). • Cyber security: Pupils know the importance of protecting systems and data from cyber threats. • Network threats: Pupils know the nature of common threats including malware, phishing, brute force attacks, denial of service, data interception, etc. • Penetration testing: Pupils know that penetration testing is used to identify and fix vulnerabilities in systems.
--	---	--	--	---	---	--

					<p>difference between lossy and lossless methods.</p>	<ul style="list-style-type: none"> • Social engineering: Pupils know how manipulation techniques (e.g. phishing, pretexting) are used to gain access to systems or data. • Security measures: Pupils know key defences such as firewalls, user access levels, encryption, anti-malware software, and password policies.
<p>Disciplinary Knowledge (The skills and approaches that students will develop)</p>	<ul style="list-style-type: none"> • Label and describe components of a computer system and explain how they interact. • Compare types of memory and storage, justifying appropriate choices for different scenarios. • Analyse the impact of CPU specifications on system performance. • Differentiate between types of software and explain their roles in a system. • Construct and interpret logic gate diagrams to model simple decision-making systems. 	<ul style="list-style-type: none"> • Declare and use variables and constants effectively in code. • Write programs using selection to control flow based on conditions. • Read and respond to user input and display output clearly. • Incorporate random values into programs for unpredictability. • Use arithmetic and logic operators to perform and evaluate expressions. • Trace the flow of a program, predicting and explaining its output with trace tables. 	<ul style="list-style-type: none"> • Break down problems using decomposition to manage complexity. • Remove unnecessary detail through abstraction to simplify solutions. • Represent algorithms using structured pseudocode and flowcharts. • Interpret and trace algorithms, identifying inputs, processes, and expected outputs. • Apply search algorithms to locate data in lists and justify when to use each. • Apply and compare sorting algorithms, 	<ul style="list-style-type: none"> • Design and implement loops (FOR/WHILE) for repeated code execution. • Trace loop execution using trace tables to predict or debug results. • Write programs with nested structures, combining loops and conditional logic. • Apply appropriate validation techniques when accepting user input. • Plan programs using pseudocode to define logic before implementation. • Break programs into subroutines, improving 	<ul style="list-style-type: none"> • Convert between number bases accurately and efficiently. • Perform binary arithmetic, including addition with carry and identifying overflow. • Apply binary shifts to values and describe their effects. • Interpret character encoding, including encoding and decoding text using ASCII or Unicode. • Analyse how changes to resolution or sample rate affect image/sound quality and file size. 	<ul style="list-style-type: none"> • Classify networks based on size and purpose (PAN, LAN, WAN). • Compare network setups (e.g. star vs bus) and evaluate the most effective structure for a given scenario. • Explain the role of protocols and relate them to specific tasks within networking. • Break down the TCP/IP model, linking each layer to real-world applications. • Identify cyber threats and assess their impact on individuals or organisations.

	<ul style="list-style-type: none"> • Evaluate storage devices based on capacity, durability, speed, and cost. 	<ul style="list-style-type: none"> • Debug simple programs by identifying logic or syntax errors through reasoning. 	<p>discussing efficiency and method.</p> <ul style="list-style-type: none"> • Evaluate algorithm suitability for specific problems (e.g. size of data set, performance needs). 	<p>modularity and readability.</p> <ul style="list-style-type: none"> • Define and use functions, with and without return values, including parameter use. • Store and retrieve data using arrays and records to manage collections of information. • Develop full working programs that use structured and reusable components. 	<ul style="list-style-type: none"> • Compare compression methods and justify the use of lossy vs lossless in different scenarios. • Break down the components of digital representations, including calculating image or sound file sizes based on attributes. 	<ul style="list-style-type: none"> • Evaluate security measures for different types of cyber attacks. • Explain and apply cyber security principles, such as confidentiality and integrity. • Recognise and assess social engineering techniques and how to prevent them. • Interpret scenarios and suggest appropriate security countermeasures.
Assessment (The methods that teachers will use to assess the progress of all students)	<ul style="list-style-type: none"> • Mid-unit assessment paper (past exam questions) • End-of-unit assessment paper (past exam questions) 	<ul style="list-style-type: none"> • Mid-unit assessment paper (past exam questions) • End-of-unit assessment paper (past exam questions) 	<ul style="list-style-type: none"> • Mid-unit assessment paper (past exam questions) • End-of-unit assessment paper (past exam questions) 	<ul style="list-style-type: none"> • Mid-unit assessment paper (past exam questions) • End-of-unit assessment paper (past exam questions) 	<ul style="list-style-type: none"> • Year 10 Mock Exam (Paper 1 and Paper 2 combined) • End-of-unit assessment paper (past exam questions) 	<ul style="list-style-type: none"> • Mid-unit assessment paper (past exam questions) • End-of-unit assessment paper (past exam questions)

Reading, Writing and Vocabulary	<p>Key Vocab Computer, Embedded system, CPU, Control unit (CU), Arithmetic logic unit (ALU), Clock speed, Cache, Register, RAM, ROM, Secondary storage, Optical storage, Magnetic storage, Solid state storage, Operating system</p> <p>Disciplinary Reading - Read an overview article on embedded systems and CPU architecture. Annotate with key terms.</p> <p>Disciplinary Writing - Write an explanation of the difference between RAM and cache memory.</p>	<p>Key Vocab Variable, Constant, Data type, Integer, String, Boolean, Input, Output, Selection, IF statement, Arithmetic operator, Logical operator, Random number, Trace table, Syntax error</p> <p>Disciplinary Reading - Read example code and identify key vocabulary used (e.g., constant, variable, input, output).</p> <p>Disciplinary Writing - Write pseudocode with inline comments describing each line.</p>	<p>Key Vocab Algorithm, Decomposition, Abstraction, Pseudocode, Flowchart, Input, Process, Output, Linear search, Binary search, Merge sort, Bubble sort, Iteration, Efficiency</p> <p>Disciplinary Reading - Read and compare merge and bubble sort explanations. Create a comparison table.</p> <p>Disciplinary Writing - Write a step-by-step explanation of how a binary search works.</p>	<p>Key Vocab Iteration, For loop, While loop, Nested loop, Selection, Data validation, Subroutine, Function, Procedure, Array, Index, Record, Parameter, Return value, Modular programming</p> <p>Disciplinary Reading - Read about arrays and subroutines in Python. Annotate examples.</p> <p>Disciplinary Writing - Create a glossary of terms used when working with loops and functions.</p>	<p>Key Vocab Binary, Denary, Hexadecimal, Bit, Byte, Kilobyte, Megabyte, Gigabyte, Terabyte, Binary arithmetic, Binary shift, Character set, ASCII, Unicode, Compression</p> <p>Disciplinary Reading - Read about binary arithmetic and shifts. Practice vocabulary in context.</p> <p>Disciplinary Writing - Write a worked example of converting a binary value to denary and explaining each step.</p>	<p>Key Vocab Network, LAN, WAN, PAN, Topology, Star topology, Bus topology, Wired, Wireless, Protocol, TCP/IP, Firewall, Malware, Phishing, Penetration testing</p> <p>Disciplinary Reading - Read about network security measures. Create flashcards for each term (e.g., firewall, malware, phishing).</p> <p>Disciplinary Writing - Write a scenario-based analysis of how a cyberattack might occur and be prevented.</p>
Numeracy	<ul style="list-style-type: none"> • Interpreting storage sizes and units (e.g., KB, MB, GB, TB) and calculating capacity requirements. • Comparing performance specifications using numerical values (e.g., 3.2 GHz vs 4.0 GHz, 4 MB vs 8 MB cache). • Drawing and reading logic diagrams, using truth tables to show binary input/output results. • Working with binary values and memory 	<ul style="list-style-type: none"> • Arithmetic operations – applying addition, subtraction, division, multiplication, modulus, and powers in programming contexts. • Random number use – working within ranges and understanding probability in simulations. • Logical reasoning – evaluating conditions using Boolean logic 	<ul style="list-style-type: none"> • Logical reasoning and sequencing – following steps accurately in a defined order. • Binary decision-making – used in binary search and flowchart logic. • Working with comparisons and loops – understanding iteration and conditions used in sorting algorithms. • Structuring trace tables – to monitor variable changes 	<ul style="list-style-type: none"> • Counting and index manipulation in loops and arrays. • Using comparison and arithmetic operators in validation and conditionals. • Tracing changes in numeric values through loops in trace tables. • Understanding ranges and bounds in arrays and loops (e.g., loop from 0 to n-1). • Applying logic operators in nested 	<ul style="list-style-type: none"> • Place value calculations in base-2 and base-16 systems. • Binary conversions – between binary, denary, and hexadecimal. • Binary addition and recognising overflow. • Using powers of 2 for shifts, conversions, and unit calculations. • Calculating file sizes using formulas (e.g., image width × height × colour depth). 	<ul style="list-style-type: none"> • Data transmission calculations – potentially understanding bandwidth, data rate, or latency comparisons. • Interpreting statistical data – such as success/failure rates of different topologies or attack types.

SUBJECT Curriculum Map

Year 11 – GCSE Computer Science

Rationale and Links to The National Curriculum

Studying GCSE Computer Science provides students with the knowledge and skills needed to understand and shape the digital world around them. Technology is at the core of modern life, from smartphones and apps to healthcare systems, transportation, and entertainment. By learning how computers work and how software is created, students gain insight into the foundations of innovation and problem-solving in the 21st century.

The course develops both practical and analytical skills. Programming encourages logical thinking, creativity, and resilience, as students design, test, and improve solutions to real problems. Understanding computer systems, data, and networks also helps students become informed users and creators of technology, not just passive consumers. These skills are highly transferable, supporting success in mathematics, science, and many other disciplines.

GCSE Computer Science is also an excellent preparation for future opportunities. With the growing demand for computing expertise in almost every industry, the subject opens pathways to further study and a wide range of careers, from software development and cybersecurity to engineering and data science. Most importantly, it empowers students to engage confidently with the digital world and to contribute positively to the technological future.

Pupils are given the opportunity to study GCSE Computer Science in Year 10 and Year 11, which helps them to develop their capability, creativity and knowledge in computer science, develop and apply their analytic, problem-solving, design, and computational thinking skills, understand how changes in technology affect safety, including new ways to protect their online privacy and identity, and how to identify and report a range of concerns.

	Half Term 1 – Ethical, Legal and Environmental Impact (15 Lessons)	Half Term 2 – Programming Robust and Secure Programs (16 Lessons)	Half Term 3 – Databases (Algorithms) (14 Lessons)	Half Term 4 – GCSE Revision (12 Lessons)	Half Term 5 – GCSE Exams
Key Topics	<ul style="list-style-type: none">Explain a range of ethical, legal and environmental impacts of digital technologyKnow the risks the technologies poseTopics covered will be cyber security,	<ul style="list-style-type: none">Be able to write a validation routine and authentication routineKnow what testing means in the context of a program	<ul style="list-style-type: none">Understand the use of relational databasesBe able to utilise the key elements of a database; Tables, records, fields, data types, primary keys & foreign keys	<ul style="list-style-type: none">Revision and Preparation for Summer Exams – These lessons are split between paper 1 and paper 2 practiceLessons give coverage of all topic	<ul style="list-style-type: none">Revision and Preparation for Summer Exams – Expected completion early May.This time will be spent preparing for final exams. The lessons at this time will be reviewing all topics covered over the Computer Science course.

	mobile tech, wireless, cloud storage, hacking, wearable tech, computer-based implants, autonomous vehicles	<ul style="list-style-type: none"> • Understand what test data is and types of test data • They will know the different types of error that can occur in a computer program • Identify errors in an algorithm or program 	<ul style="list-style-type: none"> • Understand the concept of data redundancy • Use SQL to retrieve data from a database • Use SQL to insert, edit and delete data in a database 	areas, providing focus on weaknesses identified in mock performance	
Substantive Knowledge (The knowledge the students will develop)	<ul style="list-style-type: none"> • Ethical issues: Pupils know a range of ethical impacts of digital technology, such as: <ol style="list-style-type: none"> a) Privacy concerns (e.g. surveillance, data collection) b) Bias in algorithms and AI c) Social impacts of automation and job loss • Legal impacts: Pupils know the implications of: <ol style="list-style-type: none"> a) The Computer Misuse Act b) The Data Protection Act c) Copyright law and software licensing • Environmental impacts: Pupils know how digital technology affects the environment through: <ol style="list-style-type: none"> a) Energy consumption 	<ul style="list-style-type: none"> • Pupils know what validation routines are and how they help ensure input data is acceptable (e.g. length, format, range). • Pupils know what authentication routines are and how they protect systems by verifying user identity (e.g. passwords, two-factor authentication). • Pupils know what testing means in programming — the process of checking that a program behaves as intended. • Pupils know the different types of test data: <ol style="list-style-type: none"> a) Normal (expected/typical values) 	<ul style="list-style-type: none"> • Pupils know the purpose and advantages of relational databases, including how they reduce data redundancy and improve data integrity. • Pupils know the core components of a database: <ol style="list-style-type: none"> a) Tables – collections of related data b) Records – individual entries (rows) c) Fields – attributes of data (columns) d) Data types – such as text, number, date/time e) Primary keys – unique identifiers for each record f) Foreign keys – fields that link tables together • Pupils know what data redundancy is 	<ul style="list-style-type: none"> • See previous units 	

	<ul style="list-style-type: none"> b) E-waste and disposal c) Manufacturing and transport of tech • Technology risks: Pupils know risks posed by: <ul style="list-style-type: none"> a) Cyber security threats b) Cloud storage vulnerabilities c) Hacking and data interception • Emerging technologies: Pupils know the implications of: <ul style="list-style-type: none"> a) Wearable tech and implants b) Autonomous vehicles c) Mobile and wireless technologies 	<ul style="list-style-type: none"> b) Boundary (values on the edge of acceptable input) c) Erroneous/Invalid (values that should be rejected) <ul style="list-style-type: none"> • Pupils know the types of program errors: a) Syntax errors – code that breaks language rules b) Logic errors – code that runs but doesn't behave as expected c) Runtime errors – errors that occur during execution (e.g. divide by zero) <ul style="list-style-type: none"> • Pupils know how to identify and locate errors in both algorithms and written code. 	<p>and why normalisation and relational links help prevent it.</p> <ul style="list-style-type: none"> • Pupils know how to write SQL (Structured Query Language) commands to: <ul style="list-style-type: none"> a) Retrieve data (SELECT, WHERE, ORDER BY) b) Insert data (INSERT INTO) c) Update data (UPDATE ... SET ...) d) Delete data (DELETE FROM) 		
Disciplinary Knowledge (The skills and approaches that students will develop)	<ul style="list-style-type: none"> • Identify and explain real-world impacts of digital technology decisions. • Analyse ethical dilemmas related to current technologies (e.g. surveillance vs safety). • Evaluate pros and cons of emerging technologies (e.g. implants for health vs data privacy). 	<ul style="list-style-type: none"> • Write code that includes appropriate input validation (e.g. while loops checking input). • Implement basic authentication routines (e.g. username/password checking). • Plan and carry out testing, using suitable test data. 	<ul style="list-style-type: none"> • Design and structure a relational database, with appropriately linked tables. • Identify and use appropriate data types for different fields. • Apply primary and foreign keys to ensure relational integrity. • Use SQL commands to: 	<ul style="list-style-type: none"> • See previous units 	

	<ul style="list-style-type: none"> • Interpret legal requirements and apply them to case studies or scenarios. • Assess environmental consequences of digital technologies, including carbon footprint and waste. • Use critical thinking to form balanced arguments about societal effects. • Explain trade-offs between convenience, cost, ethics, and security in tech use. 	<ul style="list-style-type: none"> • Select and justify types of test data to use. • Trace code manually (e.g. using trace tables) to identify logic or runtime errors. • Debug and fix errors in pseudocode or actual code. • Analyse error messages and use them to guide corrections. 	<ul style="list-style-type: none"> a) Extract data that meets given criteria b) Sort or filter data c) Insert, update and delete records effectively • Analyse and improve database structure to avoid redundancy and duplication. • Interpret existing SQL queries and explain their function. 		
Assessment (The methods that teachers will use to assess the progress of all students)	<ul style="list-style-type: none"> • Mid-unit assessment paper (past exam questions) • End-of-unit assessment paper (past exam questions) 	<ul style="list-style-type: none"> • November Mock Exam (Paper 1 and 2 combined) • End-of-unit assessment paper (past exam questions) 	<ul style="list-style-type: none"> • Mid-unit assessment paper (past exam questions) • End-of-unit assessment paper (past exam questions) 	<ul style="list-style-type: none"> • March Mock Exam (Paper 1 and 2 combined) 	
Reading, Writing and Vocabulary	Key Vocab Ethics, Law, Environment, Cyber security, Cloud storage, Mobile technology, Wireless, Hacking, Wearable technology, Autonomous vehicles, Data protection, Digital divide, Sustainability, Intellectual property, Computer misuse	Key Vocab Validation, Authentication, Test plan, Test data, Normal data, Boundary data, Invalid data, Error, Syntax error, Logic error, Runtime error, Debugging, Maintainability, Comments, Robustness	Key Vocab Database, Relational database, Table, Record, Field, Data type, Primary key, Foreign key, Data redundancy, SQL, SELECT, INSERT, UPDATE, DELETE, Query Disciplinary Reading - Read an overview article on embedded systems	<ul style="list-style-type: none"> • See previous units

SUBJECT Curriculum Map

Year 10 – Cambridge Nationals Creative iMedia

Rationale and Links to The National Curriculum

Studying Creative iMedia allows students to explore the exciting world of digital media and develop practical skills that are highly relevant in today's creative industries. From graphic design and animation to video production and interactive media, the course provides opportunities to design, create, and evaluate digital products used every day in advertising, entertainment, and communication.

The subject is hands-on and encourages creativity while building technical expertise. Students learn to use industry-standard software and develop project management skills by working through realistic media briefs. This approach not only strengthens problem-solving and organisational abilities but also helps students understand how to meet client needs and engage target audiences effectively.

Creative iMedia also equips students with valuable transferable skills such as teamwork, time management, and attention to detail. These are essential for success in education and employment alike. The qualification opens pathways into further study in creative and digital media, IT, and design, as well as careers in film, television, web development, marketing, and game design.

Most importantly, the course empowers students to combine creativity with technology, giving them the confidence to produce original digital content and to participate fully in the fast-paced, media-driven world around them.

Pupils are given the opportunity to study Cambridge Nationals Creative iMedia in Year 10 and Year 11, which helps them to develop their capability, creativity and knowledge in Digital Media and Information Technology.

	Half Term 1 – R093 Use of Media in Industry (15 Lessons)	Half Term 2 – R093/R094 Planning and Design (17 Lessons)	Half Term 3 – R094 Graphics Editing Tools and Techniques (14 Lessons)	Half Term 4 – R094 Graphics Editing Tools and Techniques (12 Lessons)	Half Term 5 – R094 NEA Assessment (14 Lessons)	Half Term 6 – R099 Gaming Conventions and Features (14 Lessons)
Key Topics	<ul style="list-style-type: none">Media industry sectors and products	<ul style="list-style-type: none">Work planning and documents used to support ideas generation	<ul style="list-style-type: none">Techniques to plan visual identity and digital graphicsTools and techniques to create visual	<ul style="list-style-type: none">Technical skills to source, create and prepare assets for use within digital graphics	<ul style="list-style-type: none">NEA Assessment (Working on and submit for moderation)	<ul style="list-style-type: none">Introduction to digital games

	<ul style="list-style-type: none"> How style, content and layout are linked to the purpose Client requirements and how they are defined Audience demographics and segmentation Media codes used to convey meaning, create impact and/or engage audiences 	<ul style="list-style-type: none"> Documents used to design/plan media products Purpose, features, elements and design of visual identity Graphic design concepts and conventions Properties of digital graphics and use of assets 	<ul style="list-style-type: none"> identity and digital graphics Technical skills to source, create and prepare assets for use within digital graphics 	<ul style="list-style-type: none"> Techniques to save and export visual identity and digital graphics Distribution considerations and file formats NEA Assessment (working on) 		<ul style="list-style-type: none"> Features and conventions of digital games Creativity in digital games Resources required to create digital games
Substantive Knowledge (The knowledge the students will develop)	<ul style="list-style-type: none"> Pupils know the different media industry sectors (e.g., film, TV, gaming, publishing, web, advertising) and the products they create. Pupils know how style, content, and layout are chosen and adapted to suit the purpose of a media product. Pupils know what client requirements are and how they are clearly defined in a design brief. Pupils know about audience demographics (e.g., age, gender, income, ethnicity) and audience 	<ul style="list-style-type: none"> Pupils know the different work planning methods (e.g., production schedules, task lists, Gantt charts) and their purpose in supporting ideas generation. Pupils know the documents used to design and plan media products (e.g., mood boards, mind maps, storyboards, scripts, visualisation diagrams). Pupils know the purpose, features, and elements of visual identity (e.g., logos, colour palettes, typography). 	<ul style="list-style-type: none"> Pupils know techniques to plan visual identity and digital graphics, including the use of design documents (e.g., mood boards, visualisation diagrams). Pupils know the range of tools and techniques available in graphics software (e.g., layers, selection tools, cropping, adjustment tools, filters). Pupils know the technical requirements of digital assets (file formats, resolution, compression, colour modes) and how they impact quality and usability. 	<ul style="list-style-type: none"> Pupils know the technical skills to source, create, and prepare assets for use in digital graphics, including ensuring quality and copyright compliance. Pupils know techniques to save and export digital graphics, including file types suitable for different purposes (e.g., JPEG, PNG, GIF, PDF). Pupils know distribution considerations, including appropriate file formats, resolution, and platform requirements. 	<ul style="list-style-type: none"> Pupils know the requirements of the NEA (Non-Exam Assessment), including submission guidelines, deadlines, and moderation procedures. Pupils know how to apply planning, design, and technical skills from previous units to complete a media product. Pupils know the importance of meeting client requirements, target audience needs, and assessment criteria. Pupils know how to evaluate their own work and make iterative improvements. 	<ul style="list-style-type: none"> Pupils know the different types of digital games (e.g., platform, shooter, puzzle, simulation, RPG) and their characteristics. Pupils know the features and conventions of digital games, such as objectives, rules, levels, scoring, rewards, and player interaction. Pupils know how creativity is applied in digital games, including narrative, character design, visual style, and sound. Pupils know the resources required to create digital games, including

	<p>segmentation methods.</p> <ul style="list-style-type: none"> Pupils know the role of media codes (technical, symbolic, written) in creating meaning, impact, and audience engagement. 	<ul style="list-style-type: none"> Pupils know the key graphic design concepts and conventions (e.g., alignment, contrast, proximity, balance, white space). Pupils know the properties of digital graphics (e.g., resolution, file types, compression) and how to use and source assets appropriately. 	<ul style="list-style-type: none"> Pupils know how to source, create, and prepare assets in line with copyright law and project requirements. 	<ul style="list-style-type: none"> Pupils know the requirements of the NEA (Non-Exam Assessment) and how work should meet client and audience needs. 		<p>software tools, hardware, assets, and human resources (e.g., designers, programmers, artists).</p>
<p>Disciplinary Knowledge (The skills and approaches that students will develop)</p>	<ul style="list-style-type: none"> Analyse media products, identifying their sector, style, and purpose. Interpret client briefs to extract requirements and success criteria. Match product features to specific target audience demographics. Apply knowledge of media codes when creating or critiquing media products. Evaluate media products against client requirements and audience expectations. 	<ul style="list-style-type: none"> Create and use planning documents effectively to organise project work. Generate and present design ideas using recognised conventions. Develop a visual identity that reflects a client brief and audience needs. Apply design principles to produce professional-looking media products. Select and prepare digital assets, ensuring they are fit for purpose and legally sourced. 	<ul style="list-style-type: none"> Plan and design digital graphics, showing links between visual identity and client requirements. Use specialist graphics software to create, edit, and enhance digital graphics. Apply tools and techniques to combine text and images effectively. Organise and manage digital assets, ensuring correct file types, sizes, and optimisation for purpose. Evaluate digital graphics, considering audience, purpose, 	<ul style="list-style-type: none"> Prepare assets for use in graphics projects, ensuring correct resolution and format. Export files in appropriate formats for print, web, or other media. Make informed decisions about file types, considering quality, size, and distribution platform. Apply project management skills to meet NEA assessment deadlines and criteria. Evaluate digital graphics for technical accuracy, purpose, and audience suitability. 	<ul style="list-style-type: none"> Plan and manage a project independently, including workflow, milestones, and deadlines. Develop a final media product using digital graphics, visual identity, and other media skills. Apply technical skills to source, create, prepare, and export assets appropriately. Evaluate and refine the media product, documenting decisions and improvements. Prepare and submit work according to NEA moderation requirements. 	<ul style="list-style-type: none"> Analyse digital games to identify features, conventions, and design choices. Apply creative thinking to propose or design game concepts. Plan resources needed for a game project, including digital assets, tools, and personnel. Evaluate games in terms of audience engagement, creativity, and adherence to conventions.

			and technical accuracy.			
Assessment (The methods that teachers will use to assess the progress of all students)	<ul style="list-style-type: none"> Mid-unit assessment paper (past exam questions) End-of-unit assessment paper (past exam questions) 	<ul style="list-style-type: none"> Mid-unit assessment paper (past exam questions) End-of-unit assessment paper (past exam questions) 	<ul style="list-style-type: none"> Mid-unit assessment online End-of-unit mock NEA review 	<ul style="list-style-type: none"> Mid-unit mock NEA review NEA assessment review 	<ul style="list-style-type: none"> NEA assessment submission 	<ul style="list-style-type: none"> Mid-unit assessment online End-of-unit assessment paper (past exam questions)
Reading, Writing and Vocabulary	<p>Key Vocab Media sector, Media product, Style, Content, Layout, Purpose, Client requirements, Audience demographics, Segmentation, Target audience, Media codes, Technical codes, Symbolic codes, Written codes, Engagement</p> <p>Disciplinary Reading - Read a case study of a media campaign (e.g., a film release or advertising campaign). Highlight how style, content, and layout were chosen to meet the client's brief and engage the target audience.</p> <p>Disciplinary Writing - Write a short analysis of a chosen media product (poster, website, game, or advert), explaining how it reflects client</p>	<p>Key Vocab Work plan, Task list, Gantt chart, Mood board, Mind map, Storyboard, Visualisation diagram, Visual identity, Typography, Colour palette, Design convention, Alignment, Resolution, File type, Asset</p> <p>Disciplinary Reading - Read a design case study (e.g., the creation of a logo or advertising campaign). approaches that students will develop)	<p>documentation for a digital game project.</p> <ul style="list-style-type: none"> • Plan game structure and mechanics to meet design objectives. • Use design documents to communicate ideas clearly to a team or client. • Evaluate planning effectiveness, ensuring all requirements and gameplay considerations are addressed. 	<p>assets effectively for a game project.</p> <ul style="list-style-type: none"> • Apply animation techniques to characters, objects, or backgrounds in a game. • Integrate assets and animations into a game workflow. • Evaluate the effectiveness of animations and assets in contributing to gameplay and audience engagement. 	<p>platforms and file types.</p> <ul style="list-style-type: none"> • Test and review game functionality, including animation, audio, and interactivity. • Identify and implement improvements to enhance user experience, gameplay, or technical performance. • Document changes and development decisions for iterative improvement. • Evaluate the effectiveness of enhancements and provide recommendations. 	<p>including workflow, milestones, and deadlines.</p> <ul style="list-style-type: none"> • Develop a final media product using digital graphics, visual identity, and other media skills. • Apply technical skills to source, create, prepare, and export assets appropriately. • Evaluate and refine the media product, documenting decisions and improvements. • Prepare and submit work according to NEA moderation requirements. 	
Assessment (The methods that teachers will use to assess the progress of all students)	<ul style="list-style-type: none"> • Mid-unit assessment online • End-of-unit assessment online 	<ul style="list-style-type: none"> • Mid-unit assessment online • End-of-unit assessment online 	<ul style="list-style-type: none"> • Mid-unit mock NEA review • NEA assessment review 	<ul style="list-style-type: none"> • NEA assessment submission 	
Reading, Writing and Vocabulary	<p>Key Vocab</p> <p>Pre-production, Planning, Documentation, Storyboard, Mood board, Mind map, Visualisation diagram, Game design document, Client</p>	<p>Key Vocab</p> <p>Asset, Sprite, Background, Audio, Keyframe, Frame rate, Motion path, Timing, Animation, Game mechanics, Integration,</p>	<p>Key Vocab</p> <p>Save, Export, File format, Platform, Compatibility, Test, Review, Animation, Audio, Integration, Iteration, Improvement, Development, User</p>	<p>Key Vocab</p> <p>NEA, Moderation, Client requirements, Target audience, Planning, Workflow, Milestones, Media product, Asset, Export, Evaluation,</p>	

	<p>requirements, Target audience, Gameplay mechanics, Level design, Asset, Sequencing, Resources</p> <p>Disciplinary Reading - Read a case study or article on the pre-production process for a digital game. Highlight and define key terms like storyboard, visualisation diagram, and gameplay mechanics. Annotate with key terms.</p> <p>Disciplinary Writing - Write a pre-production plan for a proposed digital game, describing the planned levels, assets, and gameplay mechanics, using disciplinary vocabulary throughout.</p>	<p>Optimisation, Interactivity, Workflow, Feedback</p> <p>Disciplinary Reading - Read a tutorial or case study on animation in digital games. Highlight key terms such as keyframe, frame rate, motion path, and sprite.</p> <p>Disciplinary Writing - Write a technical guide explaining how you sourced and animated assets for your digital game project, using disciplinary vocabulary throughout.</p>	<p>experience (UX), Gameplay</p> <p>Disciplinary Reading - Read a tutorial or case study on testing and exporting digital games. Highlight key terms such as iteration, compatibility, and integration.</p> <p>Disciplinary Writing - Write a review report on a digital game you created, explaining how you tested and refined animation and audio, and what improvements you implemented, using disciplinary vocabulary.</p>	<p>Iteration, Refinement, Deadline, Submission</p> <p>Disciplinary Reading - Read a NEA brief and highlight how the workflow, planning, and evaluation are documented, noting key terms used.</p> <p>Disciplinary Writing - Write a reflective report on your NEA project, explaining how you applied planning, design, and technical skills to meet client and audience needs, using subject-specific vocabulary throughout.</p>	
Numeracy	<ul style="list-style-type: none"> • Sequencing levels and events numerically to ensure logical progression. • Timing and pacing calculations for gameplay (e.g., duration of levels, animations). • Applying grid systems and coordinates in level design. 	<ul style="list-style-type: none"> • Calculating frame rates and timing for smooth animation. • Measuring object movement and positions in coordinates or grid systems. • Scaling and resizing assets proportionally for consistency. 	<ul style="list-style-type: none"> • Calculating file sizes for game assets and exported projects. • Estimating performance impact of added assets or features. • Using coordinates and scaling for animation adjustments. 	<ul style="list-style-type: none"> • Estimating time and resources to meet project deadlines. • Scaling and resizing digital assets to correct dimensions and resolution. • Calculating file sizes for distribution or submission. • Applying ratios, proportions, and measurements in layouts or visual design.
